

# Ubiquity2Financial Services

ProSoft Technology Group has developed its financial integration solutions to meet the specific needs of the financial institutions where the need for the integration is the greatest.

ProSoft Technology Group's Ubiquity2FIN Services are Industry ready templates toolkits and solution sets that provide support for industry standards and connectivity requirements so you can solve critical business problems in real time. Ubiquity2FIN architecture is based on webMethods™ open and scalable technology, that accelerates implementation, reduces risks and increase operations efficiencies.

Most significant challenges faced by Financial Services organizations today is need for integration of heterogeneous legacy systems, requirements for improving the links in quickly establishing B2B connectivity with trading partners to fully automate cross-enterprise processes. Complexity escalates exponentially with the number of trading partners and customers. For every trading partner, there are unique applications and distinct processes. To meet this challenge, ProSoft Technology Group provides Ubiquity2P - the most powerful trading partner onramp process for larger enterprises and B2B marketplaces. Ubiquity2P enables rapid business partner connectivity and integration through a guided B2B implementation process, Technical toolkit and software templates.

What's needed: A technology infrastructure that can be implemented quickly (within weeks) to collect, coordinate and manage critical integration information and processes.

ProSoft Financial Integration solutions provide you with the answers to these challenges. ProSoft's ubiquity2FIN services are helping a quickly growing number of prestigious customers - streamline their internal operations, reduce operating costs, and lay the foundation for extending their business beyond the enterprise.

### ProSoft Difference

- Ubiquity2FIN focuses on the integration of both business-level processes and data, whereas the traditional middleware approach is data oriented
- Includes the notion of reuse as well as distribution of business processes and data.
- Allows users who understand very little about the details of the applications to integrate the applications
- Effective utilization of Integration design patterns (Direct data mapping patterns, Hierarchical Multi-Step Pattern, Direct Request Pattern and Peer Service Pattern)

# Solutions

## Ubiquity2CUST

ProSoft's Ubiquity2CUST framework is tailored to the banking industry and its distribution channels. We achieve this by integrating banking services at all points of contact and leveraging the efficiencies of the Internet to accelerate channel productivity and reduce cost.

## Ubiquity2STP

Provides a complete solution for the end-to-end automation of the financial transaction processing. Ubiquity2STP allows front and back office systems to work with all external services, infrastructures, and the web to secure the full benefits of the integrated straight through processing.

## Ubiquity2SWIFT

Provides a single platform for the complete SWIFT integration and the straight through processing of any application to any SWIFTnet services including ISO 15022, GSTPA, Omgeo, FIX, CLS and Payments. Facilitating the easy role out of new SWIFTNet Services.

## Ubiquity2LOS

Provides a complete portfolio of solutions and services to help you manage all facets of the loan process, including loan origination, servicing and customer relationship management. Our framework helps you with the specific needs of your legacy loan origination and servicing systems while providing better integration into the value chain and more effective collaboration with customers, dealer management systems, and trading partners (credit, insurance).

## Ubiquity2FXP

Provides the only solution that brings together industry-leading integration platform and powerful process management to create a SSL based solution that immediately reduces dependencies on expensive FTP technologies to connect partners.

## Ubiquity2IEFM

E-signatures are making their first inroads into business via the multitude of in-house forms that must be filled out with an original signature. Human Resources documents, procurement, and workflow are all areas in which electronic signatures are currently applied. Automating such forms makes a great deal of sense in organizations, which have a number of remote workers. E-signatures may be employed in integrated e form management (IEFM) to cut down on the distribution and managing of paper forms.

## Ubiquity2UPAC:

ProSoft's PATRIOT Compliance solution is a comprehensive, end-to-end, real-time solution to help Financial Institutions comply with the USA PATRIOT Act. The solution rapidly satisfies the requirements of the Act by implementing an automated process for continuous monitoring that is operationally unobtrusive, secure and cost effective.

## Ubiquity2BAM:

ProSoft's support of Business Activity Monitoring (BAM) defines the concept of providing real time access to critical business performance indicators to improve the speed and effectiveness of business operations. Event Management and Alerting (EM&A) enables real time monitoring, measurement, notification, response and collaboration of performance issues disparate data sources and applications.
